

# nyc mesh

## OUR MISSION

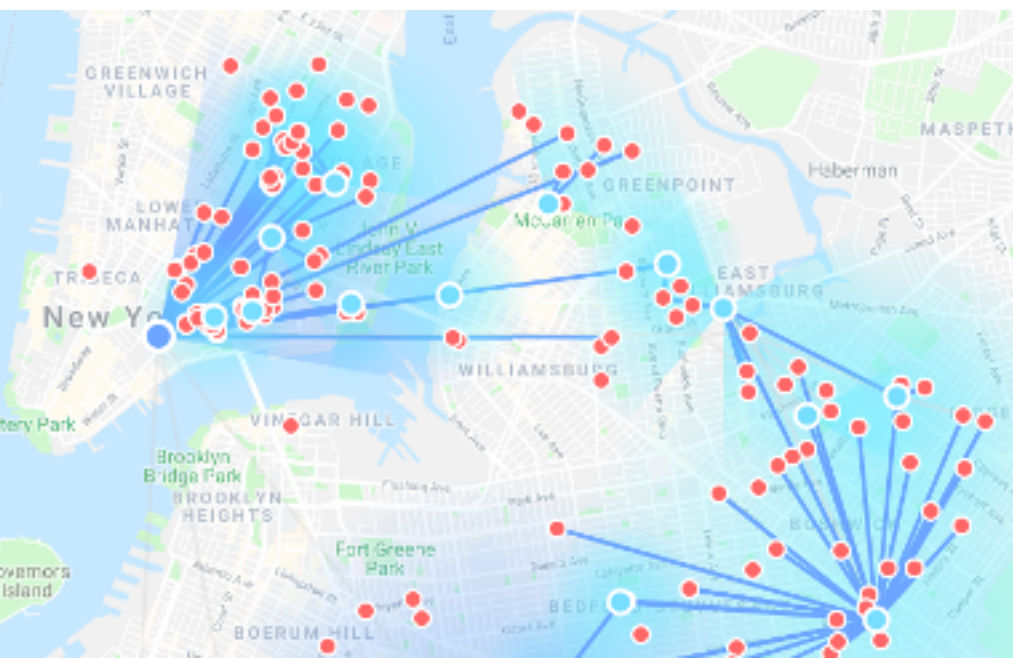

We aim to create an **open, resilient, and neutral network that is accessible and affordable to all New Yorkers** for both daily internet use and emergency use during power outages or internet disruptions.

## HOW IT WORKS

Most of our members use wireless routers mounted on a rooftop or window to connect to other members, forming a network. Our network in turn peers (connects) with many other networks at an Internet Exchange Point, providing **direct access to the internet without the intermediary of a commercial Internet Service Provider.**

## WHERE IS NYC MESH

Our network consists of Wi-Fi router nodes, supernodes and fiber spread throughout the city. We have thousands of installation requests and are connecting new members almost every day. A coverage zone and node map is available on our website. In addition to single-unit households, **we also welcome opportunities to collaborate with building managers and affordable housing providers to connect residents and common areas.**

## WHY NYC MESH

### Accessible

Committed to eliminating cost and geography as barriers to internet access.

### Neutral

Respect for net neutrality and privacy - no blocking content, no throttling data, and no collecting personal information.

### Fast

Highest deliverable speeds for everyone - no service tiers, no fast-lanes.

### Resilient

Designed to operate when disasters strike.

### Inclusive

Everyone can become an expert and a leader.

### Ours

A community non-profit run by neighbors and volunteers.

## CONNECT

Join our community online at **[www.nycmesh.net](http://www.nycmesh.net)**, **@nycmesh** on Twitter and Facebook, or by email at **[info@nycmesh.net](mailto:info@nycmesh.net)**. NYC Mesh welcomes all New Yorkers.
